Unitized 6PG & 9PG

PROPELLER GRAIN

Thanks to the combination of **Bibielle's** production technologies along with **Tyrolit's** ceramic abrasives, we have created a new line of Unitized products.

We are therefore thrilled to introduce the brand new **Unitized Ceramic Grain**, which guarantees the excellent finish of traditional Unitized abrasives with the addition of **high stock removal capacity**.

Propeller grain is a ceramic material which, thanks to its characteristic shape and hardness, offers up to 25% higher removal capacity and over 30% longer life compared to traditional Unitized abrasives.
